

Nova for Windows : Quick Tips

Installation: (Step 1) Insert the Nova for Windows disk #1 in your floppy drive (usually drive A:). (Step 2) Click on *Start* (Windows 3.1 : click on *File*) then *Run*, then *Browse*. Navigate to the floppy drive and select *Setup.EXE*. Choose *OK* and Nova for Windows will begin automatic installation. Answer the questions and swap disks when instructed.

Running Nova for Windows: Click on the Nova for Windows icon on the Windows desktop. The program begins exactly as it was when you last ran it; the Views and configurations are saved between sessions.

A. Starting a new View : Double-click anywhere on the Nova for Windows screen to launch a new View. You may have as many Views as you wish. You can also launch new Views by clicking in the Main Menu on *Views/Start new View*

B. A View may have any combination of satellites, observers, map, and text. Click the right mouse button anywhere within a View to enter the Individual View Configuration screen

C. Drag satellite names from the Satellites list to the Current Configuration

D. Drag observers from the Observers list to the Current Configuration

E. Right-click inside any of the list boxes to further configure them. For example, right-clicking inside the Groups list box takes you to the Groups Setup screen.

F. Select the type of map and text that you want the View to display

G. Save complete configurations for quick access

H. Click here to turn AutoTracking on/off

I. Right-click inside the AutoTracking Status Box to select the AutoTracking satellite & observer.

AutoTracking:... just mouse-click on the On/Off button in the AutoTracking Status Box. Choose the AutoTracking satellite & observer by right-mouse clicking inside the Status Box. The Status Box may be placed anywhere on the Windows desktop.

On	AO-13	Antenna
Azim.	246.1°	245.0°
Elev.	+26.8°	+26.0°
